Claim 1 has been amended to incorporate the features of allowable claim 9.

Claims 22, and 24 have been amended to clarify the features of the present application.

Therefore, for at least the above, it is respectfully requested that this rejection of claim 1 be withdrawn and independent claim 1 be allowed.

Claims 17, 18, and 25 are canceled without prejudice or disclaimer.

Regarding claim 8, the Office Action sets forth that Gist discloses "corresponds to the telecommunication terminal device claimed and is operated according to a method (Fig. 2) comprising: if a serial interface that corresponds to the first external terminal device of a first type claimed is selected to be connected through the modem that corresponds to the telecommunication terminal device claimed to a telephone line(column 1, lines 30-34) that corresponds to the public telephone network claimed(Fig. 2 , step 102, negative branch), establishing a serial connection interface(Fig. 2, steps 112,114, 116;column 4, lines 7-12) between the telephone line that corresponds to the public telephone network claimed and the serial interface that corresponds to the first external terminal device of first type of a first type claimed.

By way of review, claim 8 sets forth that "determining whether a first external terminal device of a first connection type interface is selected; if there is a determination that the first external terminal device is selected, allowing telecommunications between a public telephone network and the first external terminal device; if there is a determination that the first external

terminal device is not selected, determining whether a second external terminal device of the second connection type interface is selected; and if there is a determination that the second external terminal device is selected and that the first external terminal device is not selected, allowing telecommunications between the public telephone network and the second external terminal device." In contrast, Gist discloses check whether "PINS 18-25 AT GROUND ?" (step 102), if the answer is "NO" connect serial pin out to serial communication lines(step 112), deactivate parallel communications controller and activate serial communications controller (FIG. 2). As such it is unclear how the Examiner alleges that Gist discloses the features as recited in claim 8.
